

CLAIMS

This listing of the claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-5 (cancelled)

6. (currently amended) A display station for use in wireless communication with an information source, comprising:

a flexible substrate having display circuits imprinted thereon to form a flexible display screen;

~~electronic circuits~~ at least one integrated circuit chip mounted on said flexible substrate ~~and including display drivers, and a radio-frequency transceiver for permitting said~~ for controlling said display and enabling wireless communication with the information source; and

means for winding up said flexible display screen.

7. (currently amended) The display station of Claim 6 wherein said ~~electronic circuits~~ are at least one integrated circuit chip is contained in a box that hangs below said display screen; ~~causing it and causes the display screen~~ to hang straight.

Claim 8. (cancelled)

9. (currently amended) The display station of Claim 6 wherein said means for winding up includes a spring that winds up and stores energy as said display screen is extended from its stored position to an extended position; ~~and can be activated to retract upon release urges~~ said display screen from said extended position to said stored position.

10. (currently amended) The display station of Claim 6 wherein said ~~electronic circuits~~ also include the ability at least one integrated circuit chip is configured to drive sound-generating devices.

Claims 11-13. (cancelled)

14. (currently amended) A display station for use in wireless communication with an information source, comprising:

a flexible substrate having display circuits carried thereby to form a flexible display

screen; and

~~electronic circuits~~ at least one integrated circuit chip carried on said flexible substrate and including display drivers and a radio frequency transceiver for permitting said wireless communication with the information source;

said display screen having a free end and said ~~electronic circuits~~ at least one integrated circuit chip being mounted on the free end of said display screen for serving as a weight to cause said display screen to hang substantially straight.

15. (currently amended) The display station of Claim 14 wherein said ~~electronic circuits~~ are at least one integrated circuit chip is configured to drive sound-generating devices.

16. (currently amended) The display station of Claim 6 wherein said ~~electronic circuits include~~ at least one integrated circuit chip includes speech recognition circuits.

17. (currently amended) The display station of Claim 14 wherein said ~~electronic circuits include~~ at least one integrated circuit chip includes speech recognition circuits.

18. (new) The display station of Claim 6 wherein the at least one integrated circuit chip includes a micro-controller chip, a display driver chip and a radio-frequency chip.

19. (new) The display station of Claim 14 wherein the at least one integrated circuit chip includes a micro-controller chip, a display driver chip and a radio-frequency chip.
